

## CPV Fairview starts commercial operation

10 December 2019  
Osaka Gas

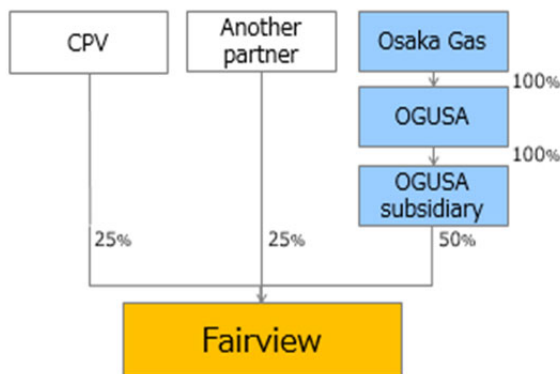

Osaka Gas today announced that CPV Fairview Energy Center (CPV Fairview), in which Osaka Gas owns a 50% equity interest, achieved full commercial operation on December 9, 2019.

Since becoming a partner in the CPV Fairview project in March 2017, Osaka Gas had worked with CPV to finish the construction by the original commercial operation date (COD) in March 2020. Thanks to the smooth progress in the construction, the project achieved a COD 3 months earlier than originally scheduled.

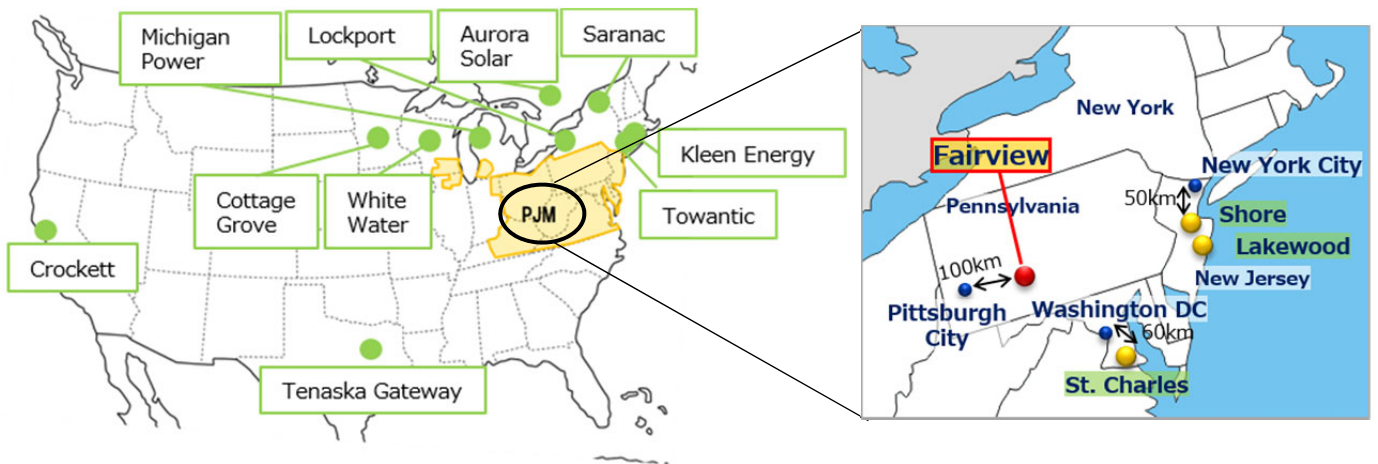

Located in Pennsylvania in the United States, CPV Fairview is a combined-cycle gas fired power plant, having an installed capacity of 1,050MW. The electricity generated by CPV Fairview will power homes and businesses in the PJM footprint.

Under Daigas Group's Long-term Management Vision "Going Forward, Beyond Borders 2030", which focuses on overseas energy markets as one growth area, the group aims to accelerate its endeavor to expand its energy businesses globally. Through this project, Osaka Gas will gain additional knowhow to manage and operate a power business in the United States and will enhance the growth of the group's US power business.
